EDUCATION

University of Illinois Chicago Chicago, IL

Bachelor of Science in Computer Science **Expected December 2026**

- **Leadership:** Technical Software Lead, SAE Formula Electric Team; developed embedded telemetry and control systems for vehicle speed and throttle monitoring.

TECHNICAL SKILLS

- **Languages:** C++, C, Rust, Python, Go, Java, SQL, Assembly, JavaScript
- **Embedded/Systems:** Linux, RTOS, ARM64, CAN, I2C, SPI, UART, GPIO, ESP32, STM32, NVIDIA Jetson AGX Thor
- **Tools:** Git, Docker, AWS, Azure, GitHub Actions, OpenCV, LightGBM, TensorFlow

EXPERIENCE

MatchNice Chicago, IL (Remote)

Software Engineer **June 2026 – Present**

- Built and shipped full-stack product features in TypeScript, React, and Next.js for a production platform with strong emphasis on reliability and performance.
- Automated API/data workflows and improved integration reliability for high-throughput systems, reducing operational friction and deployment issues.

CAS Enterprise Inc. Chicago, IL

DevOps & Full Stack Developer **Aug 2023 – June 2026**

- Managed AWS/Azure production infrastructure and automated CI/CD workflows with Python to improve uptime, deployment speed, and release consistency.
- Monitored system bottlenecks and optimized backend performance to improve stability and reduce downtime across critical applications.

PROJECTS

SAE Formula Electric Team — UIC **2024 – Present**

- Developed real-time embedded control logic in C++ for motor speed, battery efficiency, and telemetry analysis in a constrained vehicle environment.
- Migrated critical firmware from C++ to Rust to improve memory safety, concurrency reliability, and maintainability.
- Implemented CAN-based communication between ECUs and sensors for stable diagnostics and control.

EdgeGuardNano Intrusion Detection System **2026**

- Designed and deployed a real-time edge AI intrusion detection system on NVIDIA Jetson AGX Thor for offline monitoring and low-latency inference.
- Optimized LightGBM models for ARM64 execution and created asynchronous sensor pipelines for deterministic, high-throughput data handling.
